

**INTERVIEW WITH JULIE MATTHEWS
MEDICAL DEVICES TECHNOLOGY AND PROJECT MANAGEMENT**

When did you join Centaur - Segula Tech AB?

I joined Centaur - Segula Tech in 2001 after working in the Medical Devices industry for 6 years.

With almost 10 years as consultant with Centaur - Segula Tech, how do you maintain your motivation and positive attitude?

Being a consultant can bring the excitement of being able to move around different companies and sometimes even different industries. It means that you are always learning something new and developing your network which is something that I enjoy. Centaur - Segula Tech strives find a good balanced between developing its consultants and the needs of its customers, which means there is always room to grow and improve yourself.

What is your current assignment?

I am currently working with our in house team as the project manager on a medical devices project. Here I bring my experience with CE marking and technical documentation to the forefront.

What is most interesting in this assignment?

This assignment is interesting because I am working with a customer that I have not worked with before. Giving me the opportunity to see how they work, whilst at the same time I can bring my rucksack of other experiences to help them evolve their processes.

How do you get feedback on your daily job and assignment?

As a consultant you have two managers. The first is a manager within your customers organization. This person you work with on a daily bases and get feedback on how things are going. Though the biggest complement is when they want extend your contract. Secondly you have a Business Unit Manager that you have regular phone and email contact who provides feedback and personnel development coaching.
